PROFILE SUMMARY

A dedicated developer with over 2 years of experience in mobile app and website development. Passionate about learning and continuously improving skills to deliver high-quality projects.

WORK EXPERIENCE

OBANANA CORP. 2022 - PRESENT

- Collaborated with clients throughout the development process, providing regular updates and ensuring alignment with project objectives.
- Collaborated with team members to streamline development processes by sharing insights and solutions that enhanced efficiency and code quality, and was entrusted with training interns, guiding them through development processes and fostering their technical and development skills.

Web & Mobile App Development

- Designed and developed user interfaces for websites and mobile apps using HTML, CSS, PHP, JavaScript, TypeScript, TailwindCSS, and frameworks such as React, Laravel, Next.js, React Native (Expo).
- Tested and debugged code to ensure functionality and performance across various platforms.

Backend Development

- Designed and implemented back-end architecture, including schemas, models, resolvers, and middleware, using PHP, Node.js, and Express.
- Using NoSQL (MongoDB), PostgreSQL, and MySQL for efficient data management and storage.
- Utilized Docker for containerized development.

Odoo ERP Development

- Designed, developed, and deployed custom Odoo modules tailored to specific business needs, enhancing core apps such as Sales, Inventory, Accounting, Website, and Ecommerce with added business logic, process automation, and custom views.
- Built a fully customized Quality Management System (QMS) module, integrating workflows for inspections, dynamic checklists, approval routes, and reporting, aligned with internal audit and compliance requirements.
- Performed migration and upgrade of custom modules from Odoo 16 to Odoo 18, ensuring compatibility with the evolving framework, updating models, views, and logic, while improving UI/UX for better user adoption and system performance.
- Integrated with external systems and APIs where needed and applied best practices in module structuring, security rules, and XML views.

LLM/AI Integration

- Designed and delivered Retrieval-Augmented Generation pipelines in Python, combining Ollama-powered local LLMs, embeddings, vector DBs, and prompt engineering to create accurate, context-aware AI assistants.

OJT / Intern

- During my OJT I assisted in developing websites, contributing to various aspects of the development process.

SKILL/EXPERTISE

- HTML
 - CSS/SCSS
 - Javascript
 - Typescript
 - React JS
 - Node JS
- React Native (EXPO)
 - NextJs
 - MySQL
 - NOSQL
 - PHP
 - Odoo
- Docker
 - Python
 - Git
 - AI (LLMs, RAG, Prompt Engineering)
- Digital Arts (painting, sketching)
 - Web and Mobile UI Design (Figma)

EDUCATION

- Asian Institute of Maritime Studies

2019 - 2023

 - Bachelor of Science in Computer Science
- Pasay City East High School

2013 - 2019

 - Senior Highschool - TECHVOC - Bread and Pastry & Food and Beverages
 - Junior Highschool
- Bangkal Elementary School I, II, III

2007 - 2013

 - Elementary School

SEMINARS/WORKSHOP

- VB.NET and MySQL webinar
- Microsoft applications (Word, Powerpoint, Excel) webinar
- CyberSecurity webinar
- Cisco Packet Tracer webinar

KEY PROJECTS

ObananaPay Mobile Payment App - OBANANA CORP.

Role: Designed and developed both the frontend and backend, implementing core payment flows, QR functionality, and secure data handling.

Brief Description:

A modern mobile payment application enabling users to send and receive money instantly, scan or generate QR codes for transactions, view detailed receipts, search transaction history, and save frequent contacts.

Key Features:

- Built the mobile app UI with React Native + Expo for a smooth, platform-native experience.
- Developed RESTful APIs using Node.js/Express with MongoDB/Mongoose for secure data storage.
- Implemented QR code generation and scanning for fast payments.
- Added transaction history, receipt downloads, and saved contacts for convenience.
- Focused on a user-friendly design with clean navigation and efficient payment workflows.

KEY PROJECTS

Retrieval-Augmented Generation Service - OBANANA CORP.

Role: Designed and developed the RAG service and integrated it into Odoo Discuss using Python, FastAPI, LangChain, Ollama, and a vector database.

Brief Description:

A Retrieval-Augmented Generation system enabling users in Odoo Discuss to ask questions and receive accurate, context-aware answers sourced from internal company PDFs (manuals, policies, procedures). The service processes and indexes PDF content into vector embeddings and retrieves relevant context during queries to enhance AI responses.

Key Features:

- Implemented REST endpoints for querying (/query) and document ingestion (/upload-pdf).
- Used LangChain for embedding generation, vector indexing, and similarity search.
- Leveraged Ollama as the LLM backend for context-aware response generation.
- Integrated seamlessly with Odoo Discuss, enabling chat-based knowledge retrieval.
- Provides fast internal knowledge access and reduces manual document lookup effort.

GIS Web Mapping Application - OBANANA CORP.

Role: Designed and developed the interactive GIS mapping interface and integrated it with Odoo for data management and access control. I built the frontend using React, Leaflet, Tailwind.

Brief Description:

A web-based GIS application that visualizes geolocated properties on an interactive map. Users can click map pins to view property details, apply filters to refine visible properties, and draw/edit polygons to define property boundaries. All spatial data and metadata are synchronized with an Odoo backend for secure storage and centralized management.

Key Features:

- Built an interactive map UI using React + Leaflet with dynamic property markers and popups.
- Implemented filtering by property attributes (status, area, custom tags) for focused exploration.
- Enabled drawing, editing, and deletion of polygon boundaries directly on the map.
- Integrated with Odoo for backend storage, synchronization, and user access control.

Dynamic Digital Calling Card & Creator - PERSONAL PROJECT

Role: Designed and developed the full platform, including the QR-based contact display and customizable calling card builder. built this using Next.js, Tailwind CSS, MongoDB

Brief Description:

A digital calling card platform where users can share their contact information via a QR scan and also create personalized digital calling cards. The system provides customizable templates where users can adjust layout, colors, and typography to craft a unique personal brand identity.

Key Features:

- Built with Next.js for a fast, seamless web experience.
- Used Tailwind CSS to create clean, modern, and responsive UI components.
- Implemented MongoDB for storing user profiles, card designs, and template configurations.
- Enabled QR code scanning to instantly display user contact details on the web.
- Added design customization tools for editing card templates (colors, fonts, layout).
